

Carl Olson has followed insects since before he could pronounce their scientific names. As Associate Curator at the Department of Entomology of the University of Arizona, and a research associate at the Arizona-Sonora Desert Museum, Carl works with advanced insect studies as well as creating programs for the general public.

Always eager to help people learn more about, and thus appreciate, insects, Carl travels the Southwest describing the fascinating behaviors of insects and their intricate connections with humans.

In addition to teaching classes on such subjects as Aquatic Entomology or Insect Biodiversity & Land, Carl has published tens of articles and books on his favorite topic. He has a particular fascination with cultural entomology and the way we give insects their common names.
