Chiricahua National Monument

The remarkable rhyolitic rock formations and extraordinary diversity of plant and animal species preserved in this park in southeastern Arizona are the subjects of this colorfully illustrated park guide..

Millions of years ago, volcanic eruptions spewed debris over twelve hundred square miles of what is now southern Arizona. As the eons passed, erosion and weathering created the “Wonderland of Rocks” that we see today – a forest of spires, balanced rocks, and spires that dot the canyons and hilltops.

Vividly illustrated with drawings and color photography, *Chiricahua National Monument* is a great introduction to a beautiful geologic preserve and its unique surrounding ecosystem. Photos by Jack Dykinga, George H. H. Huey and several others.
